

Sea and Shore birds Field Study: Follow up Exercise

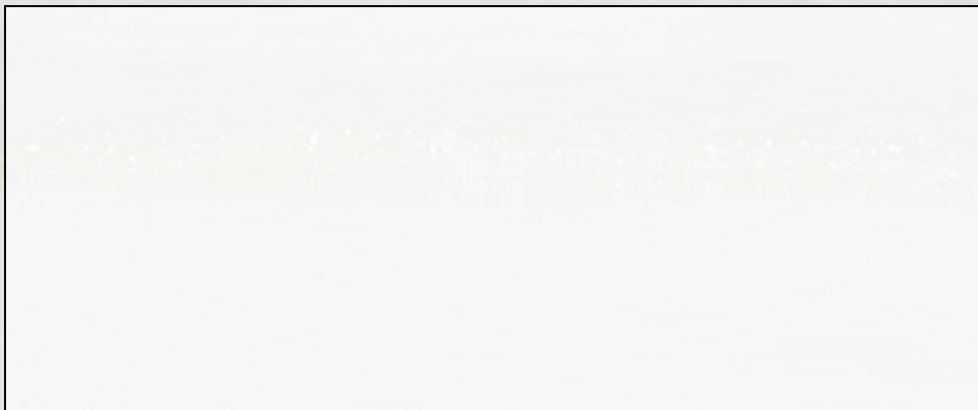

1. The aim of the exercise was to:

.....
.....

2. Within this field study what three coastal habitats were examined?

1) 2) 3)

3. In the box below. Draw a detailed sketch of a bird species you examined in the field.

4. On your sketch label physical adaptations that this species possesses that help it survive in coastal and marine environments

5. Research and compare the physical adaptations of sea and shore bird species with terrestrial species. i.e. Kookaburra.

.....
.....

6. Why was it important to have the exact same methods at each field site?

.....
.....

7. Research and explain using an illustrated diagram in the box below how a birds wings use their physical shape to change air pressure and create lift.

8. Give an example of a biological interaction that you observed in the field.

.....
.....

9. Did you observe any trends between bird species and study sites when you were in the field?

10. Explain your field observations with graphs using the class data in Microsoft Excel spreadsheet provided.
